================================================================================
            MAIN INPUT DATA FILE : 2D CHANNEL FLOW WITH A CONSTRICTION (A
SQUARE BAR)
                                   INCOMPRESSIBLE FLOW
                                   ISOTHERM

            DIMENSIONLESS LAYOUT :

                 Length scale     : h (the channel height)
                 Reynolds number    Re_h= rho_0.U_0.h/mu= 100

                 dimensionless quantities :
                   velocity U*      = U/U_0
                   kinetic viscosity= 1/Re_h

                 dimensionless domain : Lx/h= 10

                 Initialisation = uniform velocity field
                 inlet flowrate = uniform profil

               INLET AND OUTLET  BOUNDARY CONDITIONS
                     (DIMENSIONLESS)
================================================================================
=
Keep in mind that the domain is enclosed by default.
Here the inlet and outlet conditions are located at the ends of the domain.
They replace the walls by default over the areas of interest.

Inlet : Uniform flowrate profil
