

Output data

Here we show an example of usual data acquisition :

- Instantaneous fields
- Statistical fields
- Time series from probes located at specific positions

The various parameters related to each type of output data are originally splitted by topic in the appropriate namelist. For a sake of clarity, they are directly regrouped for each type of output data as shown here :

For instantaneous fields

```
&Field_Recording_Setup      Precision_On_Instantaneous_Fields= 2 /
!--- option value for writing results in double precision (1 = single
precision)
&Simulation_Management    Fields_Recordng_Rate = 1.0D-00 /
!--- Recording rate (in time unit)
&Instantaneous_Fields_Listing Name_of_Field = "U" , Recording_Enabled =
.true. /      !--- Recording of the first velocity component enabled
&Instantaneous_Fields_Listing Name_of_Field = "V" , Recording_Enabled =
.true. /      !--- Recording of the second velocity component enabled
&Instantaneous_Fields_Listing Name_of_Field = "W" , Recording_Enabled =
.false. /     !--- Recording of the Third velocity component disabled
&Instantaneous_Fields_Listing Name_of_Field = "T" , Recording_Enabled =
.true. /      !--- Recording Temperature enabled
&Instantaneous_Fields_Listing Name_of_Field = "P" , Recording_Enabled =
.true. /      !--- Recording Pressure enabled
```

For statistical fields

```
&Simulation_Management Start_Time_For_Statistics= 1.D+2 ,
!--- Start time for computing the statistical fields
                  Time_Range_Statistic_Calculation = 1.D+00      /
!--- time range over which the statistical field computation is performed.
When it has been covered, the results are recorded and a new statistical
computation starts again
&Field_Recording_Setup      Precision_On_Statistical_Fields= 2 ,
!--- option value for writing results in double precision (1 = single
precision)
                  Time_Statistics_Enabled= .true. ,
!--- time statistics are performed (true) - classical statistics (false)
                  Sample_Rate_For_Statistics= 1      ,
!--- Sample rate (in time iteration unit)
                  Statistic_Space_Average_Type=
"NO_SPACE_AVERAGE" /      !--- option on spatial averaged fields
&Statistical_Fields_Listing Name_of_Field = "<U>" , Recording_Enabled =
.true. /      !---- Averaged I-velocity component
&Statistical_Fields_Listing Name_of_Field = "<V>" , Recording_Enabled =
```

```
.true. / ---- Averaged J-velocity component  
&Statistical_Fields_Listing Name_of_Field = "<P>" , Recording_Enabled =  
.true. / ---- Averaged pressure
```

For time-series from probes

```
U  
, V      , W      , T      , P      , RH0  
&Probe_Quantities_Enabled Temporal_Series_For_Quality_Enabled(:)= .true.  
, .true., .false., .false., .true., .false.   / --- Selection of  
physical quantities  
&Simulation_Management Probe_Recording_Rate = 10  
/ --- Recording rate (in time-iteration unit)  
&Probe_Location Xi= 2.0 , Xj= 1.5 , Xk= 0.0 /      ---coordinates of  
probe 1  
&Probe_Location Xi= 3.0 , Xj= 1.0 , Xk= 0.0 /      ---coordinates of  
probe 2
```
