

This file is composed with 12 line of integer values.

- The first two lines allows the user to select a series of files should be converted. The first line is associated to the subdomain number and the second line to the file number which are included in the file name.
- The third following lines are associated to the grid indices of the computational domain. These indices allows the user to build a space box for extracting only a part of fields from the computational domain.

visfield_s.dat

```
00000      1  !--- 1st subdomain number and total number of subdomains
to be considered (related to the 1st number in the file name)
0      200  1  !--- 1st file number, last file number and file number-
step to be considered (related to the 2nd number in the file name)
EOF
```
